---

**FORT BELVOIR, VA** - The Army decided to shift the IVAS Operational Test and fielding to a date later in FY22. The Army is fully committed to its partnership with Microsoft to advance specific technologies to meet operational requirements and maximize warfighter impact. The Army conducted an Adversarial Electronic Warfare and Cybersecurity Test in September 2021, and plans to execute testing regularly throughout FY22. This decision allows the Army and Industry team to continue to enhance the IVAS technology platform ensuring Soldiers achieve overmatch in Multi Domain Operations. The Army intends to continue developing and fielding this revolutionary, first-of-its-kind technology in FY22.

#### Project Timeline:

- OCT / NOV 2020: Soldier Touchpoint 3 (STP 3) & Distinguished Visitor Days
